Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 26-28, drawn to detecting a tag indicating an amount of rotation of a mammogram image, classified in class 382, subclass 296.
- II. Claim 17, drawn to a method of extracting image features for measuring an amount of rotation of a mammogram, classified in class 382, subclass 289.
- III. Claims 18-20, drawn to a method of scanning files after a system crash, classified in class 382, subclass 312.
- IV. Claims 21-25 and 29-31, drawn to manual data entry, classified in class 382, subclass 311.
- V. Claims 32-34, drawn to recovering scanned data after a system crash, classified in class 382, subclass 306.

The inventions are distinct, each from the other because of the following reasons:

Inventions in groups I-V are directed to related methods of digital image processing. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have different modes of operation. For example, group I relates to detecting a tag indicating an amount of

image rotation. Group II relates to extracting image features to create a tag indicating an amount of rotation. Group III relates to scanning files after a system crash. Group IV relates to manual data entry of images. Group V relates to recovering stored data after a system crash. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
